Web Master Scripts - Descriptions

401 SCRUBBER PASSWORD HURLER BLOCKER

Protect your password site by immunizing yourself against password hurlers. 401 Neutralizer intercepts failed login attempts virtually instantly and blocks the referring IP address to send the attacker off to find easier prey. Logs attacking addresses so you can hunt down the guilty party and torture them at your convenience.

AFFILIATE AD ROTATOR – MYSQL BACKEND AFFILIATE BANNER AD ROTATOR

HEY! This is NOT just another banner rotator - although it DOES rotate banners, the concept is different. Similar to our superfast banner rotator but instead of rotating just banners - this script actually rotates AFFILIATE HTML used by sites like advertising.com, linkexchange.com, et.,al. Thus allowing the serving of banner images from REMOTE servers. Provides ability to quickly rotate at random your affiliate ad partners and also countercheck their statistics against yours to see if anyone is cheating you. Accounts can be set to track by impressions, clicks, or days. You can set price per click, impression, or day and the system will keep track of all your affiliate codes as they are displayed on your site in one convenient interface. System load is virtually undetectable. All stats are in realtime. Admin panel allows you to browse all accounts and their individual statistics, view all banner ads at once, modify/delete accounts, and check overall statistics and payouts you are earning from affiliate programs. Also a great script to trade banner space with other sites that use their own tracking software.

AGENTS OF FORTUNE – AFFILIATE SOFTWARE

AGENTS OF FORTUNE is your complete product or service marketing solution. Allows you to recruit and pay affiliates a commission for referred sales. Instant account activation, secure POST method banner code or text links, real time statistics, full integration into virtually all online billing systems and shopping carts. Negligible server load requirements. Ergonomic statistical interface allows zooming into sales records

from year to day to sale. Exports payout schedules into flat file database. Offers multilevel commission structure to reward affiliates that refer new affiliates.

AGENTS UNLIMITED MULTILEVEL AFFILIATE SOFTWARE SOLUTION (MYSQL BACKEND)

Affiliate engine capable of integrating into virtually any billing system allows you to reward affiliates commissions for referred sales. Our newest system supports unlimited levels of payouts to drive your sales through the roof! Each payout level may be set to a percentage of the sale or a flat rate commission. Similar interface and features as our popular Agents of Fortune Professional including instant account activation, secure text links, real time statistics, easy database backup and restore. Simple integration into virtually all online billing systems and shopping carts. Negligible server load requirements. Ergonomic statistical interface allows zooming into sales records from year to day to sale.

AGENTS OF FORTUNE PROFESSIONAL - FASTEST AFFILIATE SOFTWARE AVAILABLE - MYSQL DATABASE ENGINE SUPPORTED

Agents of Fortune Professional offers MYSQL database support to handle extreme data loads. Allows you to recruit and pay affiliates a commission for referred sales. Instant account activation, secure text links, real time statistics, full integration into virtually all online billing systems and shopping carts. Negligible server load requirements. Ergonomic statistical interface allows zooming into sales records from year to day to sale. Exports payout schedules into flat file database. We can completely integrate your website into any payment system and structure multiple commission structures/formulas and even set up the install to handle multiple websites. Realtime stats, automated data backup and completely compatible with revshare, authorize.net, shopping carts, and other popular billing solutions. Database backup and restore in the event of server crash.

ALL WHOIS - CDOMAIN PRO CLONEWARE

Works just like cdomain but coded Superscripts style from scratch. Increased the speed of performance with all the features a professional registrar needs. All whois does everything cdomain pro boasts only better. Enables researching domain name availability for all registrars (not just internic). This script is a nice service for webhosting companies. Allows user to search for domain name availability with ANY registrar. Also does global searches based on keywords so if you can't register party.com you can search all the other NIC's in the world (i.e. .uk, .mx, etc.) to see if you can register

something like party.uk.co or whatever. Adding new registrars is a snap and installation takes maybe 2 minutes.

ANYPAGE WEB PAGE MAILING SCRIPT - ALLOW SURFERS TO EMAIL YOUR WEBPAGES WITH ADS TO FRIENDS

CGI Script allows surfers to email webpages to their friends from your site. Smart CGI works so you do not have to create special unique forms for every page of your website. One form will work from any URL. Email arrives as exact copy of your webpage in HTML format. You can insert custom headers and footers such as banner ads, text ads, affiliate code, etc. Script also records IP of sender to block malicious users. Subject line automatically generates full URL of webpage. Works great with [Automark](#) to get people to bookmark your site or our [Mailjacker](#) script which will force email recipients browser to open up your website. Will even work with overlapping domain names.

AUTOMATIC BOOKMARK - Automatic bookmark cgi script INCREASES RETURN TRAFFIC!

Automatic Bookmark is a cgi script that will automatically pop up a "bookmark" suggestion box for new people that visit your site for the first time. This Script increase the percentage of Return TRAFFIC! Unlike using straight javacode, the script will not "annoy" regular visitors or people that return to your site by popping up the window every time they return. The first time a new visitor hits your "target page" the bookmark window pops up but never again. This is a great way to get your site bookmarked by more visitors. You can also execute the script by using javascript (eg: close window type scripts) so if they quit their browser the bookmark window pops up. Also a great way to collect custom 404 (page not found) traffic by redirecting to this script.

AUTONIC - Automatic domain on hold grabber

Stalking out a killer domain name that is on hold status? Set autonic to run on crontab every morning with Internic reboots and it will query whois automatically to check the current registration status. If Autonic finds the domain name to be available it will instantly register it automatically. Also sends you a copy of the registration form.

AUTOPOPPER SECURE EMAIL ATTATCHMENT TOOL - NEVER WORRY ABOUT EMAIL ATTATCHMENTS EVER AGAIN

Easy to install cgi script forwards your emails to you as normal but **FIRST REMOVES** and **STORES** all attachments **SECURELY** on your ftp/html server where you can decide if you want to download them at your discretion. Absolutely **NO** attachment viruses or worms can penetrate this system. Emails are delivered with all other information intact and a link at the bottom you can click on to view your attachments received. Also great for saving time download your email as attachments are all stored on the webserver.

MULTILEVEL AUTORESPONDER - SELL MULTILEVEL AUTORESPONDERS - REPLICATION SYSTEM

CGI Script that allows you to sell or give away autoresponder email addresses that send out unlimited followup emails to subscribers. Subscribers can be manually added or just email the recipient. Secure admin and webmaster area provide detailed statistics and management of mailing lists. Admin may add custom footers and headers to all outgoing email. Remove link function. Setup is a breeze.

AUTOTHUMB - Automatic Thumbnail Maker Gallery Maker and Photo Organizer

CGI Script which you simply drop inside your website and execute and it spiders your entire directory structure, creates thumbnail images and organizes all your photographic content into easily browsable html with thumbnail tables that link to the actual image. Creates true uniform, beautiful thumbnail images - this is not just some cheap html trick. Great way to surf and organize complex image archives and to organize content automatically. You can control the size of the thumbnail images and the look of the html output very easily. Spiders even the most complicated directory structures and wont make mistakes like other programs! Save endless hours creating thumbnail galleries and organizing content by using this program to archive thousands of images in seconds. Thumbnails are organized into a seperate, parallel directory structure and not littered everywhere. Logs all activity and creates files you can use for other applications or simply search through to find that jpeg you lost 6 months ago.

AUTOMATIC USERADD - CREATES REAL UNIX USER ACCOUNTS FROM WEB BASED FORM

From a simple 2 form field (username/password) this script creates a **REAL** ftp account. Any mediocre programmer can also add other routines to add mail accounts, etc. A great building block and you won't find this type of script **ANYWHERE** on the net. We are the only site with this technology. So get your cgi book out and you can do all kinds of

cool stuff with this utility. This is perfect for using with the apache append/prepend mod compilation if you know what i mean - if you dont.... then wait... geocities is coming!

AVS CHECK PRO- mysql backend age verification system with realtime processing

Basically this is a clone of adult check age verification system. Probably even better than their software actually. Mysql database backend and authorize.net payment gateways allow you to run your own Age Verification System. Built in 2 level affiliate structure allows you to payout commissions to both webmaters that refer members and webmasters that refer other webmasters. Search the entire AVS database by keywords or browse by category. Generates signup messages, realtime cc processing. Webmaster lounge lets them see their commissions in realtime or tweak their sites. Admin interface gives you overall control to approve or delete sites. You can also revoke commissions to webmasters in event of fraud or chargeback.

NIGHTLY BACKUP SITE ARCHIVER - Automatic Website Mirroring / Backup Utility

If you make money online then you know your website is your lifeline. Keep your password databases, billing databases, or even your entire website safe and secure on multiple webserver! Now you can sleep assured that your files can be restored in seconds from a perfect backup done automatically as often as you wish. Easy to setup script that will archive and transfer a copy of your entire website or any directory of files to another server to provide you with a nightly, weekly, or monthly automated backup. Files are not overwritten so there is no danger of file corruption caused if backups fail and write OK files.

BLAZING FAST BANNER ROTATOR- MYSQL BACKEND BANNER ROTATION SYSTEM

Not only is this the fastest banner rotator script known to mankind it also has cool new expiration concepts for selling ads. You can setup multiple accounts and each account holder can login with a username/password to check their impressions, clickthroughs and CTR's in realtime. The cool thing is you can set accounts to expire one of two ways. Accounts can be set to expire by number of impressions (when the account holder exceeds the set number of impressions their ad automatically expires). Accounts can also be set to expire by number of days (flat rate advertising). This offers you a dual marketing approach to selling your valuable banner space. We use this very same system to sell ads on our site and it works great. System load is vitually undetectable. All stats are in realtime. Admin panel allows you to browse all accounts and their

individual statistics, view all banner ads at once, modify/delete accounts, and even check the overall impressions and clicks to your server. Single installation can run ads on unlimited sites.

BANNER GATE- CLICKS FOR PASSWORDS PROMOTIONAL SYSTEM

A completely new concept in marketing your password site. Allow users to signup and send you unique clicks for free access to your password site. Instant account activation, secure code blocks uses of image tag and frame triggers. Tracks both with cookies and IP addresses to prevent cheating. Members can check their stats in realtime. Admin interface allows easy overview of accounts and deletion of dead accounts. Once user has surpassed your predefined threshold an email is sent out to the administrator notifying that a free account has been earned. We put this system on our site and watched our traffic soar by 35% in the first 3 days.

BATCH CREDIT CARD PROCESSING ENGINE - Bulk credit card database processor

Need a quick and dirty solution for processing billing databases? Batch processing engine allows you to process bulk credit card transactions via authorize.net. Simply upload your comma delimited text database and execute. Outputs results to comma delimited text databases compatible with popular spreadsheet programs such as microsoft XL and Access. Supports Mastercard, Visa, Amex, Discover, JCB, and Online Checks. Compatible with authorize.net and any similar gateway service.

BLACKWIDOW - Internal web spidering utility

Blackwidow spider engine will index your entire web server and create an ASCII output file of urls. Explores subdirectory structures. URL database is 100% compatible with exploit submission wizard and WAHOO! The script runs and creates a flatfile database of every single url on your server.

IBILL BROKER - Affiliate system for IBILL password sites

Billing system and referral system all in one. Complete integration of IBILL processor and agents of fortune affiliate system. Contains all features of both systems! Works on all webservers and operating systems. Allows you to payout advertisers a commission on

your IBILL sales. Superfast code for even the largest sites. Fully automatic control of your password sales and databases. Deletes users automatically after accounts expire. Handles unlimited account configurations of recurring, nonrecurring, and web 900. Manual admin interface allows you to add/delete/search and modify accounts. Advertisers signup and receive realtime statistics on their commissions. Each account has independant commissions so you can structure your sales commissions any way you want. Does not require server sides includes. Your advertisers may access their statistics in realtime. Allows you to revoke sales in the event of fraud or chargeback from the admin interface. New version is compatible with websites running multiple billing software such as DMR, ATS, etc. and has even more enhanced security features to block hackers.

CHAMELEON - http security software

Selectively Serves HTML based on the CLIENT HOST INFORMATION. Great for protecting your html that you worked so hard on to get your site at the top of the search engines. Serves one page to the search robots and another to surfers.

CLICKBLASTER - MYSQL POWERED MULTILEVEL CLICKTHROUGH AFFILIATES SYSTEM

Clickblaster will send you so much traffic your provider may actually shut you down. This is a seriously hardcore promotional engine with a mysql backend for ultraspeed and ultralow CPU drainage. The system tracks hits through 3 levels and even to the point of sale. Thus you track the "hit and runs" or primary clickthroughs, the people that actually surf through your site to a secondary page, and even to a 3rd (or tertiary) page. Various rewards are distributed depending on the QUALITY of the clickthrough traffic so you don't get screwed by losers trying to cheat your system. There are 4 variables to compare. Initial clickthrough, secondary page, tertiary page, and sale. The 2nd, 3rd, and sale pages can be hidden ANYWHERE on your server making it a virtual nightmare for anyone to try and hack through. Banners are served from the AFFILIATES server which minimizes server load. Impressions are not tracked in this version because well - who the hell cares anyway? The point of this clickthrough system is that when an affiliate earns a specified number of "credits" they earn a free prize, free password, or whatever. All screening is done manually and the great thing is everyone that signs up is automatically stored in a handy email database for future marketing. Tracks with cookies and our special IP tracking for extra security. You really should try this one out on our site to get a feel for what this is all about. All I can say is when I launched the predecessor (bannergate) I was completely unprepared for the level of traffic this was about to generate. This is now the second generation of this type of clickthrough marketing tool and I feel it is a superior design. Bannergate has its place, but this in my opinion is like the atomic bomb. Members can check their stats in realtime. Admin interface allows easy overview of accounts and deletion of dead accounts. Once user

has surpassed your predefined threshold an email is sent out to the administrator notifying that a free account has been earned.

CLICKTRADERS - Superfast mysql link exchange system

Flat-file database software will crash your server or the software after about 5,000 hits per day. These systems are commonly banned on most IPS for this reason. Clicktraders employs streamlined code, MYSQL binary database support, and the latest code tricks from the gurus to provide a superfast link exchange system that will handle even the largest link exchange sites. Banners are served from the client server so you don't have to pay bandwidth for all of those impressions. Provides editable subtext link that appears every time a banner is generated to drive your program. Ergonomic statistical interface tracks raw/unique impressions and clicks through new technologies developed by Superscripts.com that do not rely on bogging down your system with huge databases of ip addresses. Super Link Exchange members can BUY credits to get more impressions by the push of a button where they are transported to your handy order form. Uses either syntax or realtime validation through Authorize.Net. clicktraders can be customized for any billing gateway by our cgi gurus. There is truly nothing like this on the internet. Credit buying interface supports Mastercard, Visa, American Express, JCB, Diners Club, Novus, and Online checks. Admin interface allows you to check the overall system performance and statistics, browse through and count your users, bulk email your members and edit/delete their information.

CYBERSTASH - Automatic membership/admin system for cybercash password sites

Automatic security and billing system for pay sites. Cyberstash is THE LEADING CGI SYSTEM FOR selling PASSWORDS TO MEMBERSHIP SITES BY DIRECTLY interfacing into a Cybercash merchant mall Run from your own cybercash server or a merchant account on a mall server. Unlike many other systems, Cyberstash completely PREVENTS your users from submitting duplicate orders causing chargeback chaos. We are an OFFICIAL Merchant Developer Partner Candidate for Cybercash.

DATABASE - Multiuser online database creator and search engine

Search, edit, and import ASCII databases on your web server. Endless possibilities for serving databases over the world wide web. Import your ASCII database from microsoft access right over the internet. Password protected editing offers administrator ability to edit or delete any file. Also features the ability to allow visitors to add individual password protected database entries that they can edit. Export and import the database into any program that can interpret comma delimited formats.

DBAY AUCTION SOFTWARE - MYSQL driven auction software with realtime validation

Based on the popular EBAY auction site, we have created a MYSQL driven clone with many of the same features. User registration, feedback ratings for users, proxy bidding, automatic batch closing done hourly. You can add unlimited custom categories. Performs keyword searches and category browsing just like the real thing. Binary MYSQL database allows you to serve even the largest auction based websites. Supports auction reserves, minimum bids, bidding wars, and more. Default setup charges flat rates per ad type (i.e. bold faced, add icon, hilite ad). Customizable headers and footers appear on every page. Credit buying interface supports Mastercard, Visa, American Express, JCB, Diners Club, Novus, and Online checks. Admin interface allows you to edit/modify/delete users. Member interface allows editing information or if they forget their password it is automatically emailed to them.

PERL CGI SCRIPT DECRYPTER - Ever get a script that looks something like this???

```
split(/=/, $pair); $value =~ tr/+/ /; $value =~ s/%([a-fA-F0-9][a-fA-F0-9])/pack("C",
hex($1))/eg; $value =~ s/~!/~!~/g; $value =~ s/( \*\(\|\)\|\|\|)/g; $FORM{$name} = $value;
$FORM{$name} = &untaint($FORM{$name}); } $FORM{'customerid'} =~ s/ //g;
$delimiter = "|"; if ($stay_in_ssl) { $FORM{'MerchantApprovedURL'} =~ s/http://https:/i;
$FORM{'MerchantUnApprovedURL'} =~ s/http://https:/i; } if ( $FORM{'mailprog'} =~ /(-
server)/ ) { ($FORM{'mailprog'}, @temp) = split(/ /, $FORM{'mailprog'});
$blat_server_temp = " @temp"; } @common_sendmail_paths = ("/usr/sbin/sendmail",
"/usr/lib/sendmail", "/usr/bin/sendmail", "/bin/sendmail", "/var/qmail/bin/qmail-inject",
"/usr/home/stormer/bin/sendmail", "C:/winnt/system32/windmail.exe",
"C:/winnt/system32/blat.exe", etc...
```

What a pain in the ass! It's all one line of code and a complete pain in the ass to tweak and customize. Now with my simple Perl De-Obfuscator (decrypter) you can in seconds turn something like the above into something more pleasant and practical like this below:

- read(STDIN, \$buffer, \$ENV{'CONTENT_LENGTH'});
- @pairs = split(/&/, \$buffer);
- foreach \$pair (@pairs) { (\$name, \$value) = split(/=/, \$pair);
- \$value =~ tr/+/ /;
- \$value =~ s/%([a-fA-F0-9][a-fA-F0-9])/pack("C", hex(\$1))/eg;
- \$value =~ s/~!/~!~/g;
- \$value =~ s/(*\(\|\)\|\|\|)/g;
- \$FORM{\$name} = \$value;
- \$FORM{\$name} = &untaint(\$FORM{\$name});
- } \$FORM{'customerid'} =~ s/ //g;
- \$delimiter = "|";
- if (\$stay_in_ssl) { \$FORM{'MerchantApprovedURL'} =~ s/http://https:/i;

- `$FORM{'MerchantUnApprovedURL'} =~ s/http:\/https:\/i;`
- `} if ($FORM{'mailprog'} =~ /(-server)/) { ($FORM{'mailprog'},@temp) = split(/,$FORM{'mailprog'});`
- `$blat_server_temp = " @temp";`
- `} @common_sendmail_paths = ("/usr/sbin/sendmail", "/usr/lib/sendmail",
"/usr/bin/sendmail", "/bin/sendmail", "/var/qmail/bin/qmail-inject",
"/usr/home/stormer/bin/sendmail", "C:/winnt/system32/windmail.exe",
"C:/winnt/system32/blat.exe",`

DNS ALERT WEBMASTER DOMAIN REGISTRATION WATCHER - TIRED OF MANAGING 100's of DOMAIN REGISTRATIONS MANUALLY?

Most webmasters have lot's of domains. Some have thousands! For webmasters like us it is a royal PAIN to keep track of all your registrations. Ever go on a vacation and find out some domain name you completely forgot about is expired? Well, now you can fully automate your registration watching with DNSALERT. This script will monitor ALL of your domain names and email you a warning WELL in advance DAILY until you register the domain name! It also keeps track of all your other domain names and gives you an exact readout of when everything expires day by day. Great time saver!

DOMAIN NAME APPRAISER - SCAN EXPIRED WHOIS DATABASE IN REAL TIME FOR GREAT NAMES!

CGI Script scans our DAILY UPDATED EXPIRED DOMAIN DATABASE for domain names with high search engine presence. Scans all the search engines that matter including google, lycos, msn, altavista...Threshold value allows you to cutoff loser domains with less than interesting presence.

FAKE CRONTAB - CRONTAB EMULATOR

CGI Script emulates unix crontab script scheduler which is not available on all isp's. Script can schedule scripts per hour, day, month, or per # of visitors. Option to email you when execution takes place and email describes processes completed. Installation in seconds and works on virtually any ISP.

FAKE ID - SPOOF YOUR IP ADDRESS OR DERAILED TRACEROUTE AND SURF PRIVATELY

Easy to install security cgi script that will create a list of untraceable or traceable but fake IP addresses which you can use with any browser to surf in absolute privacy. CGI Script uses live database information to find "anonymous" hubs all over the world. The script then tests each hub for connectivity and security and sorts all of the results into several files such as a list of hubs you can use to make people think you live somewhere else (new zealand, russia, whatever), a list of hubs which block traceroutes back to your REAL ip address allowing complete privacy while you surf, also other lists are created for informational and research purposes thus all of the hubs analyzed are recorded. Default scan is to seek out hubs on port 80 and 8080 but you can scan for any port you like. Every 11 year old hacker knows all about this little secret but nearly all "webmasters" do not. This is the second script in our new fraud scrubbing security software products. This allows you to exploit the internet to mask your location and identity or completely fake it. Nobody can block you from their website! This script just made all those 2bit PC .htaccess tricks obsolete! Don't worry! We wouldn't release something like this without a countermeasure (cure).

FREE FOR ALL LINK NETWORK - Commercial link pyramid system

Here is a simple way to watch your traffic soar. Truly an internet marketing machine. I took the free4all link concept to the next level and designed a multilevel free4all link NETWORK. The network allows your site visitors to put their link on your FFA page AND download the FFAN script from your site so they can join your FFA NETWORK. When a new site installs the FFAN script you are notified by email after the first link goes up. With a simple click their FFAN is added to your submission list. The new site may also allow visitors to download the script and so on creating a pyramid of FFAN sites. Everytime a new site appears you are notified thus building your submission list. Through the admin interface you can cleanup the list if there are any dead links and with one simple form you can now broadcast your urls of choice into every FFAN site that joined under you!

FILE UPLOADER - SUBROUTINE FOR UPLOADING FILES THROUGH THE BROWSER

File uploader makes it quick and easy for visitors or clients to send you files by uploading them to your web site. Features include the ability to optionally restrict file types, email the webmaster with a list of uploaded files, and/or create a log file listing uploaded files. For security reasons the location of all uploaded files is kept hidden (It can even be on a different server!). This script is ideal for webmasters or any one else who wants to allow visitors to be able to easily upload content.

FORM MAIL REPLICATION SYSTEM - ALLOWS YOU TO GIVE OUT FREE FORM MAIL ACCOUNTS

CGI script allows you to setup in minutes and users signup to build forms to use for selling products, surveys, or whatever. Easy to use web based interface helps clients build forms even if they don't have a clue about html. They can also add custom autoreply messages, delete forms and build as many forms per account as they wish. Each form has a custom header and footer area for you to display banners and information so its a great way to target BUYERS. Set it up on a secure server and you have about the best banner targeting available! All administration is done through the browser. Shows you how many forms are currently online and how many forms have been executed. Admin panel allows you to broadcast email messages to all users though the web. Also allows you to add a custom email signature to each outgoing message.

REMOTE FTP SERVER - Sell single files securely

Developed as an extra security measure for people that sell FILES and SOFTWARE. REMOTE FTP SERVER runs from the browser and will push a file off of your server to the client server. Client enters their host, username, password, and a destination directory and the file is transferred at ethernet speeds even if they are only using a dialup account. Great way to add extra security to sites distributing files. May be integrated into payment systems fairly easily by using ENV(remote_user) variable as the ftp hostname.

GIMME DAT FILE! - No file is safe! Download shockwave pdf midi flash files and more with this CGI Script

Don't you hate it when you find some super cool shockwave, midi file, pdf, flash, or whatever and you CAN'T save it from the website! Well now its super easy! Just enter the full URL to the file and click the button. File will be transferred to your webserver at blazing fast ethernet speeds. This CGI SCRIPT will download ANY FILE! Works great for downloading .swf - midi - pdf - flash files and more from ANY website!

GUESTBOOK REPLICATOR - MULILEVEL REPLICATING GUESTBOOK PROMOTER & SPIDER TRAP

Forget link-o-matic. They suck anyway. This is a multi-level free giveaway guestbook replicator that is completely self contained. Easy to install. Setup and users can create with a simple form an instant customizable guestbook on any topic they wish. Each "sub" user even has their own admin panel. The master admin panel keeps you in control and allows you to blast messages to all the message boards (you can charge for this by integrating with one of our many billing systems). Since everything is cross-linked this makes a great spider trap to give you traffic. Your custom header and footer are displayed on every single page. Admin point and click allows total control over the entire system.

SEARCH ENGINE KEYWORD HARVESTER - Scan for popular search engine phrases based on keywords

This script allows you to scan for popular search engine words and phrases derived from your search word. Also allows filtering undesirable words (badword list) which can be modified on the fly. Great for generating doorway pages or getting ideas for domain names or buying search engine keywords.

HOT LINK NUKE - SCREW OVER IDIOTS HOTLINKING TO YOUR STUFF

Hot Link Nuke was designed to put and end to the hot linking of images. Image sentinel not only prevents other sites from linking directly to your images but also hides the location of your images, making it impossible for anyone to access your hard won content without going through YOUR web site. A visitor following someone else's link to one of your images can optionally be sent back where they came from or redirected to a page of your choosing (e.g. your sign up page or links page or Yahoo for that matter.)

HTMLOCK - HTML PROTECTOR STOPS PEOPLE FROM DOWNLOADING IMAGES AND HTML

CGI script that prevents right clicking to save images from your HTML and also prevents viewing source code AND downloading the HTML. Completely stops snaking HTML and importation by busting up links trees. This will annoy the hell out of those losers ripping off your HTML source code for sure. It's not 100% bulletproof but will stop 99.99% of the idiots that can't create content that's for sure and will give them one hell of a headache trying to rip off your site.

HTML PARSER - HTML TO TEXT CONVERTER

CGI Script will spider your website to index all html files then you can run the parser to convert the html to RAW TEXT. Great way to build information databases free from html tags if constructing search engines. Also useful analytical tool for search engine studies such as keyword densities, etc. Great subroutine that can be applied by the wise webmaster for many purposes. Useful tool for integrating with LINKING scripts such as gossamer threads, etc. Extracts the core data from HTML and turns into simple text.

HTML ROTATOR - SAY GOODBYE TO BANNER ROTATION! THIS IS THE NEW ADVERTISING PROTOCOL YOU SAW IT HERE FIRST!

MYSQL BACKEND ROTATES HTML ENTIRE WEBPAGES OR PARTS OF PAGES

MYSQL backend database system allows you to rotate HTML. Similar to a banner rotator in concept but allows rotation of complete HTML (including images, javascript, any HTML tags). HTML can be rotated as an exit system, rotate your start page or you can rotate a frame in a page or just a paragraph or WORD inside any HTML page. It gets better though! This rotator also allows you to categorize your system with unlimited categories of rotations. In other words you can setup a category example such as "marketing" or "webhosting" and only rotate HTML ads appropriate for that target audience. You can sell your ad space however you like (exit pages, frames, whatever) and each client is provided a login to check their stats. If you have a client with multiple ads the convenient interface lets them see all their stats with ONE single user/pass so they don't have to be bothered remembering 500 different passwords - although that is optional too. You can also setup to expire one of two ways. Accounts can be set to expire by number of impressions (when the account holder exceeds the set number of impressions their ad automatically expires). Accounts can also be set to expire by number of days (flat rate advertising). This offers you a dual marketing approach to selling your valuable banner space. We use this very same system to sell ads on our site and it works great. System load is virtually undetectable. All stats are in real-time. Admin panel allows you to browse all accounts and their individual statistics, view all ads at once, modify/delete accounts, and even check the overall stats to your server. Single installation can run ads on unlimited sites.

PASSWORD HURLER

Are you safe from password hurlers? This isn't the first or the last but it's the FASTEST password hurler ever. Test your security and see just how safe your site is from attackers. Unless you are using the latest password software you are vulnerable to brute force attack where hackers can enter and trade passwords to your site in less than 5

minutes. Password Hurler runs at blazing ethernet speeds to crack weakly protected .htaccess style password sites by hurling thousands of password guesses per minute until the system successfully guesses the correct combination.

INSTALLMENT PLAN - MAKE MORE MONEY SELLING VIA INSTALLMENT PAYMENT PLANS

No more sales price limits! This tool allows you to sell file packages by an installment plan. Clients make an initial down payment then get partial access every month until they complete the payment plan. Great way to increase sales and revenue! Installment payment plans include interest after all! Compatible with revshare to distribute commissions to resellers on recurring or non-recurring basis. Admin panel allows easy editing of accounts through the browser.

LANDMINE

Why spend hundreds of hours toiling away on your website when a single person armed with a web spider can suck all the data from your site in minutes? Tired of spiders mining data from your site? Whether its images, mp3's, avi's, midi files or whatever if you have a lot of files on your site you are going to become targeted by computers running powerful spiders to datamine your entire website. In minutes they can grab THOUSANDS of images off your site and give them away for FREE. Protect yourself with Mine Field.

LINK SORTER - URL sorting utility

Ever need to go through a huge list of urls and filter out the dead links? Most webmasters do from time to time. Link sorter allows you to upload a simple ASCII one per line file of urls and run the script from telnet. The script goes through the list and sorts the urls into numerous lists of good urls, dead sites, redirects, etc. If you have a long list and need a break the program can be restarted from where you left off automatically.

MAIL JACKER - Hijacks webtraffic through email

This is only the beginning of the insane scripts we have decided to release after 3 years of hiding them away. Cgi script sends emails to your OPT-IN newsletter lists with message of your choice. As soon as the email lands in the recipients inbox and they read it or even try to delete it the browser pops open and lands them right on your homepage! They wont have a clue what hit them! Works from telnet or browser.

MAILMAN - ethernet speed mailing list server

Send your opt-in mailing lists at lightning fast speeds by using your own server mail program or web host and keep in contact with your clients with MAILMAN. Sends from any text email databases at blazing ethernet backbone speeds. Compatible with all extractor software on this site and all other commercial email extractors. If you run a mailing list for your website (and these days who doesn't?) then you need to keep in touch with your members. MAILMAN makes your job easy and FAST. Be in charge of your own mailing list, news letter, etc. A must for any e-business!

MAIL STATS - GET THE BASIC STATS EMAILED DAILY

This is a simple hidden counter which can be called through either an image tag or SSI. It will not only keep track of your visitors by day, month and year but will send you an email giving you the previous days totals.

MASTERGATE - Automatic billing/administration for password sites real-time or syntax only credit card validation

Mastergate is simply the most comprehensive pay site billing and security system available. No other software package offers such advanced security and administration power. Processes your billing information and automates your password database. Includes form error checking, automatic account expiration, admin search, admin modify, admin edit, and admin delete. Clients are forced to provide a valid (working) email address to obtain access to your pay site. Mastergate is also capable of interfacing into online processors such as IBILL BASIC TP or AUTHORIZE NET for real-time validation. Default installation emails invoices through secure or non-secure servers. Supports Mastercard, Visa, American Express, JCB, Diners Club, Novus, and Online checks. This system does not do recurring billing.

MATCHMASTERS - Personals matchmaking software

MATCHMASTERS personals is a completely automated cgi system which allows members to signup instantly, have their account information emailed to them and interact with other members online. Members can browse the database or refine their search criteria to find the mate they are looking for specifically. Search results are broken down into 10 per page and members search criteria are saved in the event that no suitable matches are found. A matchbot program may be set to run through the entire member database and search histories to notify by email any member that the matchbot finds a suitable match for. This pulls older members back to the site to retrieve the results. Members may also upload pictures of themselves, send messages to each other, and bookmark other members they want to keep in touch with. All contacting through the site retains complete anonymity for the security of the users (including their REAL email address). All members are known to each other by screen names only. Administration panel allows edit/delete of members, mass emailing (will not timeout), and member counting.

MATCHMASTERS PRO - Professional personal classifieds matchmaking software

Based on our popular matchmasters script this is a more serious solution for dating sites. The pro version uses powerful MYSQL database structures and modular code design to allow complete customization of the searching/profile parameters and html output (cosmetics). Capable of altering the search parameters/fields to unlimited option or keyword based search fields. Multiple keyword search logic allows matching for complex search profiles. Admin panel allows counting members, bulk emailing all members, login/edit/delete of member profiles. Members can upload photos, search, bookmark profiles, view member photos, and send private email messages anonymously. Many more features planned for this systems future upgrades. May be implemented as a free "attraction" to your existing website or easily integrates into billing systems to charge for services.

MICROCITIES GEOCITIES STYLE AD INSERTER - INSERTS HTML HEADERS AND OR FOOTERS ON THE FLY INTO HTML

Now you can setup a true geocities clone not only on a dedicated server but on a VIRTUAL SERVER! If you are using a dedicated server our AUTOMATIC USERADD program combined with a little tweaking completely automates the setup of REAL ftp, telnet, webspace, and email pop accounts. Now add on this program to insert HTML headers and or footers on the fly on every webpage! You can even set this up to work in just a subdirectory of a domain or the whole domain! The applications are endless. Use

to put ads at the top and bottom of forums, guestbooks, wwwboards, you name it. Script allows you to choose extentions affected (.htm, .html, .shtml, etc) and sets up in seconds! No compiling or hacking apache. This is the easiest and once again the FIRST program of its kind on the net.

MICRO EMAIL EXTRACTOR - Web based buddy mailing list extractor

Installs in 10 seconds, upload any text file of your choice and the email extractor sucks all the valid email addresses from any file and dumps them into a flatfile database for use with your mailing software. You can use html, sql databases, or any txt file to upload. Now you can take any databases and suck out all the email addresses in seconds!

MICROSEARCH - Customizable web-based searchable MYSQL database

Need to put a searchable database online? Microsearch allows you to easily generate custom, searchable databases with unlimited searchable fields (keyword or selection based). Creates add.html and search.html interfaces automatically. Admin interface allows search and delete of records quickly. Mysql architecture for handling large databases with the fastest search technology.

MIMEMAILER II - Client side formmail with attachment sending - FORM MAIL SYSTEM THAT SENDS ATTACHMENTS

Simple form mail system that allows your CLIENTS to send your formmail with UNLIMITED attachments. Requires no modules and setup takes less than a minute. Easy to customize. Similar to our other program (mimemailer) but the difference is Mimemailer II allows the CLIENT to send YOU files whereas Mimemailer sends files from you to the client. Working demo is available on our site so you can see the difference.

MIMEMAILER - Selling single files is easy! - FORM MAIL SYSTEM THAT SENDS ATTACHMENTS

Finally! Now its simple to sell single files with MIMEMAILER. Easily integrates into any of our billing systems such as IBILL Processor (use as webgood page) or Mastergate, or any of our other systems. Simply use MIMEMAILER as your "Thank you" page and you can instantly send single attachments automatically! Security protocols block people from sending multiple copies of the file to their friends or multiple files to themselves. Requires no modules and can be setup in about 1 minute.

MULTIPLE DOMAIN HOST - HOST UNLIMITED DOMAINS ON SINGLE VIRTUAL SERVER AND ADVERTISE

CGI Script allows you to host and point unlimited domains into distinct directories on one hosting account. Works for canonical domains also (eg: test.yourdomain.com, example.yourdomain.com, whatever.yourdomain.com). Script also allows you to insert customized HEADERS, FOOTERS, AND also INSERT html ANYWHERE via keyword match. Thus you can insert banner ads right after the html header information so it doesn't screw up people's background colors and titles. This script is so simple and powerful it allows you to turn a \$20 hosting account into a miniature dedicated server with GEOCITIES style advertising!

AUTOMATIC MYSQL BACKUP - AUTOMATE BACKUP AND ARCHIVAL OF YOUR MYSQL DATABASES

Simple to install script which completely automates backup and archival of any or all of your mysql databases. You can use in combination with "[Nightly Backup](#)" to even backup to remote servers. Easy to install and reliable. Date stamps each backup so you have no worries about 0k database backups! Just plug this script in and all your MYSQL backup needs are done automatically.

PASSWORD NAZI - Intercepts and stops password traders forever

Now you can stop password traders forever! Password nazi is a completely self contained application that installs in minutes, running automatically on your server watching people that login to your password protected areas. Password Nazi notices suspicious login activity and immediately terminates the account sending the password trader back to the password sites searching for one of your competitors that doesnt use Password Nazi. Save thousands on your bandwidth bills and sleep peacefully... Password Nazi takes no prisoners.

NEWSWIRE - Form-based automatic search engine submission software

Frustrated by trying to get noticed on the search engines? Sick of filling out all of those forms? This simple script automatically sends your url information to the top search engines. Simply click a button and zap your site to the top! Offering this service to surfers is a great way to increase traffic!

OPT IN PRO - Multiple Opt In Newsletter Subscription Service & Email List Collector

MYSQL Backended script based on our [email harvester](#) only this is MYSQL powered and does UNLIMITED mailing lists. Recruit webmasters and pay them for collection of emails. Create unlimited newsletters. Webmasters never worry about lost traffic since surfer never leaves their site. Secure confirmation and removal system included. Webmasters and admin have realtime statistics. Payouts only for UNIQUE email addresses.

PC AUTHORIZE GATEWAY - Automatic membership/administration for passwords sites which interfaces into TELLAN'S pauthorize hub

REALTIME CREDIT CARD VALIDATION FROM PC AUTHORIZE! Why pay ENORMOUS TRANSACTION RATES WITH OTHER BILLING COMPANIES? Get your own merchant account and INTERFACE DIRECTLY INTO YOUR BANK! Direct posting to PC AUTHORIZE HUB and automation of password databases for membership sites. Includes all the usual MASTERGATE fraud-scrubbing and duplicate transaction blocking tools.

POETRY BOT - Intellegent poetry generator and more...

This awesome script allows you to entertain your visitors with randomly generated poems in any style you want. Just change the simple text files containing nouns, verbs, and the like and you get randomly generated poems in any style you want. Ginsberg was chosen as default. The point of this script will not be obvious at first. Sure its fun to play with and entertaining but the power of this script was when I hacked out the routines to generate titles for websites to spamdex the hell out of adultcheck and other sites... don't worry, its coming soon. In the meantime have a little fun for a change.

DOMAIN POPULARITY ANALYZER - HOW POPULAR IS YOUR WEBSITE? FIND OUT NOW!

CGI Script allows you to find out how many websites are linking to you all over the web! Searches the BILLIONS of websites in seconds to return total number of links found for your domain name! Returns a numerical value for total number of links in seconds which equals the number of sites found currently linking to your domain name.

PORTAL ANALYZER - Multipage hit counter

Portal Analyzer is a convenient solution to tracking your websites popularity. Its a lot like having an invisible hit counter on every page. Portal Analyzer produces daily reports telling you exactly how many unique visitors you received and which page they entered by. This way you can tell not only how many people visit your site but which pages attract the most visitors. Works behind the scenes by crontab or can be executed from the browser to provide the easy to follow reports. Results are tabulated by most popular to least popular entry page. Unlike access counters which are frequently not accurate this works off of your server logs to provide absolute accuracy in counting.

PROXYBURNER WEBSITE SECURITY TOOL - TERMINATES ACCESS TO HACKERS USING NETWORK SPOOFING TECHNIQUES

Easy to install security script that stops hackers from using possibly their FAVORITE hack of choice - NETWORK SPOOFING. These are the number one criminal techniques used by hackers, hotlinkers, credit card fraud, etc. These hackers will use sites that publish lists of hubs you can connect into and make people think you live in england, florida, arizona, you name it. They think they are untraceable and for the most part they are. NOT ANYMORE! HA HA! This nifty script kills them in 60 seconds or less. No matter how many times they come back with a new fake IP they are blocked at the ROOT! After a few retries they will go to your less secure competitor and screw with them instead! An absolute MUST HAVE SECURITY SCRIPT. NO SITE IS SAFE WITHOUT IT!

REGEXFILTER - BATCH FIND AND REPLACE SPIDER.

Drop this CGI script into any directory on your webserver and run it from the browser or telnet and it instantly does a search and replace (or delete) for any regular expression(s)

in every file present inside the directory structure. Smartspider technology locates all files and will completely probe even the most complex subdirectory trees. Use it to replace (for example) any slogan, menubar, graphic link, phrase, misspelled word(s), old phone numbers, etc. Best of all is you can use this tool to remove all of those stupid MICROSOFT spam HTML tags <!--msnavigation--> & <meta name="Microsoft Border" content="t, default"> for example from your entire website. The CGI script counts, logs and reports on all files filtered in real time. CGI script is extremely fast.

REVSHARE TOOLKIT - Affiliate software for ibill revshare (fully automated affiliate system)

Completely automate your affiliate system and check writing with the REVSHARE TOOLKIT. The Revshare Toolkit allows you to fully automate your affiliate system into IBILL's Revshare system. Instant account activation from a single form. Real time statistics, support for recurring commissions, and ability to set different commission levels for each affiliate. Check processing and payouts are handled for you automatically. Ergonomic statistical interface allows zooming into sales records from year to day to sale.

REVSHARE PRO - MYSQL database driven affiliate software for ibill revshare

Completely automate your affiliate system and check writing with the REVSHARE TOOLKIT. The Revshare Toolkit allows you to fully automate your affiliate system into IBILL's Revshare system. Also supports MULTIPLE site promotions through a common portal and a single installation. Instant account activation from a single form. Real time statistics, support for recurring commissions, and ability to set different commission levels for each affiliate. Check processing and payouts are handled for you automatically. Ergonomic statistical interface allows zooming into sales records from year to day to sale. Pro version uses MYSQL database for unparalleled SPEED, and reliability.

POWER SAFELIST PRO - EASY TO SETUP SAFELIST EMAIL PROGRAM WITH RECURRING BILLING

CGI Script sets up in seconds and interfaces with any paypal account for easy automated billing. Even charge monthly recurring billing for your subscribers! New users simply click a button to signup! They get a confirmation email with instructions which you

can customize. Custom headers and footers. Everything you need to quickly setup a money making safelist service. Works with paypal billing.

SALES LEAD GENERATOR - EFFECTIVE SALES LEAD GENERATOR OR SURVEY CGI SCRIPT

Easy to setup CGI Script that generates highly targeted sales leads or perform surveys by allowing your website visitors to register and download a free sample of your merchandise, a coupon, discount code, tutorial, information, or any other incentive. Requires visitor to enter valid email address in order to receive free download access. Registration form may be customized - only required field is email field and opt-in checkbox. All information collected in the form is stored in a flatfile database which can be easily imported into Excel or Access. Script allows registrants to opt-in, and opt-out so there is no worry about sending email to anyone that did not request it.

CREDIT CARD FRAUD SCRUBBER - TRACK DOWN CREDIT CARD USERS BY GEOGRAPHY

First script of a series of tools to be released that will put a massive dent into hackers trying to use false information to gain access to your website or products using stolen or fake credit card information. Works with virtually any billing system allowing you to see if the billing address and actual geographical location of person ordering correlate.

SITE SEARCH PRO - MYSQL BACKEND SITE SEARCH ENGINE

CGI Script allows you to provide keyword based searchability to your entire website or parts of your website. Intelligent spidering does all the work. HTML is opened, parsed, metaterms extracted, titles extracted, and all html is converted into raw text. You can alter search output results by awarding point scales to matches by keyword, title, metatags, metakeywords, etc. MYSQL based so even the largest sites wont crash even with hi search load.

SLOT MACHINE - Opt in email collection cgi script

Clever opt-in email collection cgi script which allows visitors to your site to play a virtual "slot-machine" to win a product or get a free membership to your website. Player can "warm-up" spinning the slot machine as many times as they want before spinning for real. Multiple security features allow you to prevent abusers from using bots or cheating the system. Requires real email address to collect prize. If you setup the slot machine for "products" you can also customize and link the slot machine images so visitors are looking at products from your site. When they click on one of the images they are taken to a special product information url. Great way to build targeted email lists from your visitors and great promotional tool.

SNAKE KILLER - MONITOR, CONTROL AND BLOCK NETWORKS DOWNLOADING YOUR WEBSITE

CGI Script monitors for suspicious activity generated by network users stealing your content. Easy to setup perl script will monitor your logfiles for suspicious activity and allow you to block access to people relying on your website for content. PLUG-IN (soon to be released) Script allows you to completely screw over users that stalk you and steal from you by sending them to a completely different website! It sure would be a shame if those losers that steal from you and make a living off of your hard work would accidentally end up downloading viruses, trojan horse files, spyware, and packet sniffers. Revenge is in your hands!

SPAM WHAM SPAM IS BANNED - SPAMBOT CRAWLER BLOCKING FORM MAIL

Ok, you've tried just about everything to prevent spam bots from collecting your email address and sending you a mountain of junk email. Even using FormMail doesn't work because your email address can still be found on your web site and spam bots are getting smarter every day. This is a simple form to email script that has the webmaster's email address embedded in the script and therefore inaccessible to robots.

SPAM TERMINATOR - 100% BULLET PROOF SPAM ELIMINATOR - STOP SPAM FOREVER!

THE FIRST AND ONLY SPAM TERMINATION SOFTWARE EVER RELEASED!
Install script in seconds and say goodbye to unwanted email, spam, people you don't like, FOREVER! THAT'S RIGHT! ZERO SPAM! Easily manage your buddy list which determines who can email you. Anyone NOT on the buddy list is dumped into oblivion! Even better you can still accept emails from new customers that submit emails through

forms by some ingenious filtering! So GET RID OF THOSE STUPID GET RICH SCAM MAILS and DITCH all those LOSERS emailing you NOW! Get only the email you want!

SUPER SPIDER - URL spider and domain extractor script

You are going to love this script! A simple, yet powerful cgi script with mysql database interface that will allow you to spider the internet and collect unique urls and domain names at the speed of light! 5 minutes to configure, set your starting url and the spider will start probing the internet from the starting url collecting every single link and unique domain name it finds along the way. A great way to construct targeted marketing databases or start your own search engine. Script allows you to select spidering depth or just leave it until your hard drive explodes with data. This script is a masterpiece.

SPYMAILER UNTRACEABLE STEALTH EMAIL FORM - SEND EMAIL ANONYMOUSLY THROUGH INSECURE FORMMAIL USER RELAYS

Cool CGI Script which allows you to send email from a completely anonymous and untraceable address using websites around the world. Some time ago PHRAK published security holes in the very popular and easy to find FORMMAIL 1.6 CGI Script by MATT WRIGHT. Using any search engine and some simple tips found on the actual script download you can find formmail.pl V1.6 users all over the place. This script allows you to send emails by hijacking their formmail.pl scripts to anyone you want. The email will trace back to the formmail.pl website and CAN NOT be traced back to you! Simply put recipient's email address into line one of form (who you want to email). Reply Email Address can be set to anything. Select a relay with the dropdown menu. If your relay is not working use a search engine to find another website using formmail. This script is for educational and entertainment purposes only.

DOMAIN STALKER - WHOIS ON-HOLD DOMAIN GRABBER

There are hundreds of domain names expiring every day. For one reason or another people give up on their sites -- they've lost interest, or because of current situation with advertising on Internet they can't afford to pay for hosting, or maybe they simply didn't renew their registration in time. But old links from other sites are still there. In fact, some expired domains have thousands of old links still pointing to them. It's a shame that all this traffic is going nowhere.

Webmasters work hard to get links on other popular sites, and here we have hundreds and hundreds of old links pointing nowhere. Wouldn't it be great to be able to find those

expired domain names with great link popularity, simply register it, and get hundreds of unique visitors practically for free?

This handy CGI Script which probes Internic for domains on hold status. Intuitive browser based point and click interface allows you to use keywords to scan for domains about to drop or that have recently dropped. Stores domain name lists in flatfile format so you can easily interface it with AUTONIC domain registration bot. You can also manually just click on the domain name to register quickly through network solutions. Another greatly useful feature is the ability to scan each domain name for search engine links.

STEALTH SERVER - Stealth http technology

This script is going to alter the internet forever. Now you can serve other websites FROM YOUR DOMAIN! Want to mirror an information service but don't want to spend hours copying and updating html? This script grabs html/urls from SOURCE server and generates html pages in REAL TIME from your URLS! You can even submit these to SEARCH ENGINES! I have no idea what the implications of this could possibly be but I am sure it will be interesting. You better get this script before its gone!

SUPERCART - Realtime shopping/affiliate/cc processing software

Powerful shopping cart script allows you to turn any form based website into an instant shopping mall! Extremely simple to interface your online catalog or catalog database. Use sytanx credit card validation or REALTIME credit card validation right into your bank. Fully compatible with AGENTS OF FORTUNE affiliate software to rev up your sales by awarding commissions to referred customers. Runs on HTTP or remotely on HTTPS. Compatible with Authorize.net and IBILL Basic TP accounts. Supports Mastercard, Visa, American Express, JCB, Diners Club, Novus, and Online checks.

SUPERCHAT - AOL type webchat

Web based chat similar to AOL. Members login with a unique username. The chat server offers members the ability to create their own public or private rooms. Each room displays a list of people in the room. Members may send private messages to anyone in the room or whisper to a member privately by selecting their name from the CHANNEL menu. Members may create room. After creating a new room a member may choose to be public or private thus turning the room into a public or private chat area.

SUPERCLIX - Clickthrough payout system

SUPERCLIX is a cgi system which allows you to effectively recruit and payout commissions to advertisers that send you banner clicks. Superclix features instant account activation, secure POST method banner code, and real time statistics. Negligable server load requirements. Ergonomic statistical interface allows zooming into sales records from year to day to sale. Exports payout schedules into flat file database. Offers multilevel commission structure to reward advertisers that recruit new advertisers. Now supports gateways (modulars) so you can make the system payout only when the visitor visits a page deeper in your site than the initial redirection url.

SUPERCLIX PROFESSIONAL - Clickthrough payout system

SUPERCLIX is a MYSQL database driven 2 tier clickthrough system which allows you to effectively recruit and payout commissions to advertisers that send you banner clicks. Superclix features instant account activation, text or image based link code, gateway support and real time statistics. Negligable server load requirements. Ergonomic statistical interface allows zooming into sales records from year to day to sale. Exports payout schedules into flat file database. Offers multilevel commission structure to reward advertisers that recruit new advertisers. Supports gateways (modulars) so you can make the system payout only when the visitor visits a page deeper in your site than the initial redirection url.

SUPERFETCH - Ethernet speed http retrieval software

This script runs on your unix account and will retrieve ANY file from another web server at speeds up to 100 MEGABITS PER SECOND! No more downloading huge files to your desktop and uploading to your webserver. Simply run this script and retrieve in SECONDS! I used this to download INTERNICS SEED DATABASE (a 112 MEGABYTE FILE) in about 1 MINUTE!

SUPERMALL - Multi-vendor shopping mall

Supermall is much more than a shopping cart. Supermall allows a single mall administrator to sell merchandise from multiple vendors by drop-shipment (like cd-now does). The administrator can add vendor information to the mall and add individual items

provided by each vendor so when an order is placed invoices are emailed (or can be faxed through email-fax translation services) to vendors and orders are drop-shipped so you never have to actually stock any inventory. The mall client interface allows browsing by categories (yahoo-style) or multiple keyword searches. All features are accessible by the admin panel to allow easy editing and administration of the mall. Customers and the administrator can check and print out confirmation pages created when an order is approved. Supermall supports manual credit card validation and real-time validation through authorize.net. Stores customer information in mysql which you can use for future promotional purposes. No HTML required to add new items - simply fill out forms and pages are generated for every item. Each item page can have html, pictures, etc. Item pages give you maximum search engine visibility unlike cgi-generated html pages. Many more features planned for future upgrades including statistical and profitability reports. Easily integrates into any affiliate software packages.

SUPER SORTER - SORTS ANY FILE ALPHABETICALLY AND REMOVES DUPLICATES

A CGI Script that you can use to sort and organize ANY text file database. Use it to cleanup email lists, URL lists, addressbooks, absolutely any text file can be quickly sorted into alphabetical order and all duplicates removed. Great tool to use with the whois parser so you don't waste time querying whois over and over for the same domain name. Also a great tool to sort through address books and lists of URLs if you are building a search engine. Works great for flatfile search engines such as matchmasters (not pro version) where you can quickly delete all of the duplicate submissions made from people hitting the submit button multiple times. A great tool for any webmaster.

Super Stats - Super Statistics Log Analyzer (WEB TRENDS SUCKS)

Ever purchased Web Trends? The program looks great, but is virtually useless. Everyday you had to download your stats (10-20 megabytes of data) and then Web Trends would spit out a ton of data which I manually checked and found to be inaccurate. I also signed up for their affiliate program but they never sent me a dime. Worse was 50% of the data analysis was completely worthless. Thus, I invented a completely automated version of their program except I took out all the bugs and didnt waste time making pretty graphics. This is a hardcore statistical analyzer. Calculates raw hits, page views, bookmarked visitors, home page views, unique visitors, bandwidth, page views per visitor, operating systems and browsers used, error reports, lists top referring URLs, most and least popular webpages on your site, and even does security checks to warn you of hackers trading passwords and networks launching password hurler attacks. This may not be as pretty as Web Trends but its a hell of alot more useful. Runs automatically via crontab.

your sales with REAL TIME credit card processing. Also does syntax only validation and address validation. Authonly or Deposit funds. Also compatible with IBILL Basic TP accounts. Supports Mastercard, Visa, American Express, JCB, Diners Club, Novus, and Online checks.

BANDWIDTH VALVE

Is your website on a fixed bandwidth budget? Now you can kick heavy users off your password site and keep your bandwidth bill under TOTAL control! The valve scans and kicks users off your password list if they surpass the webmaster defined bandwidth quota. Also effective secondary measure to monitor for password leaks. Most password leak security programs only scan for multiple logins but PROXY servers such as AOL, etal FAIL to get noticed! Not so with the bandwidth valver. Stop data hogs cold.

WAHOO - Batch professional url search engine submission software

Why waste valuable time and energy submitting your website to search engines that NEVER SEND HITS? Well, thats what most search engine submission software does. The fact is there are only a handful of search engines that will ever send you any significant traffic. If you have dozens of webpages (url's) or even thousands it would take you forever submitting them to useless search engines. What you SHOULD do is submit EVERY URL you have to the TOP 10 search engines ONLY. A compelling fact is that 80% - 90% of the traffic any site receives originates from one of these top search engines: Alta Vista, Exctie, Hot Bot, InfoSeek, Lycos, Magellan, Web Crawler, and Yahoo. This script searches through your entire server for EVERY possible URL. Then the complete url list is submitted ONE BY ONE to the top search engines.

WHOIS PARSER - PARSE WHOIS DATA INTO FLATFILE DATABASES

Simple script allows you to parse TLD's .com, .net, and .org into delimited flatfile databases. All data is extracted including domain owner information, all contacts, email addresses, name servers, and more. Complete whois information is stored in final database. Lightning fast parsing and no limitations on how big or small your parsing jobs can be. Great for doing marketing campaigns as both email addresses, names, and domain names are included in database which makes it easy to use for contacting webmasters on a personal basis. Great tool for constructing search engine databases.

WORMBURNER EMAIL SECURITY TOOL - STOP LOSERS FROM SENDING YOU VIRUSES AND WORMS BY EMAIL

Easy to install security script that will filter out dangerous attachments such as .pifs, worms, viruses, .dll's, etc. from your email in realtime. Returns dangerous emails to actual recipient with customizable warning message. If recipient is faked it dumps mail into the trash. All email that passes security screening is forwarded to your mailbox untouched.

EXTRACTOR PRO - WEB BASED MAILING LIST MANAGER WITH ATTACHMENTS

CGI Script to manage your opt-in ezines, mailing lists, and membership lists with a single interface. Works basically just like EXTRACTOR PRO which sells for as much as \$200. This is browser based CLONE. Our program won't time out like other programs that attempt to do the same thing. Allows you to create unlimited unique mailing lists, removes duplicates automatically, merge lists, remove from lists by substring match (EG: 'donotspam'. "edu"). Email lists are saved automatically as flat file databases which are compatible with most email software. Keeps accurate count of unique emails per list in realtime. Add or remove single email addresses from any list. Also **allows you to send attachments** to your mailings. No modules required. Easy installation.
